Abstract (en)

[origin: EP1130212A2] The sprung steel insertion-piece consists of a plate-shaped part (1) which has a section (7) inserted into a roller-blind slat. Opposite the inserted part is an angled section (5) for joining the chain links for pulling and moving the roller blind. A middle part (15) between the inserted and angled parts is wider than the inserted piece which tapers towards its end (16). The diminishing-width part has a first wedge-shaped part (14) with smaller wedge-angle (8), next to a second wedge-shaped part (14a) with larger wedge angle (9).
