Abstract (en)
[origin: EP1130339A2] The connection adapter matches an existing connection of a pipe conduit network of a heating installation to a connection of an exchange heating body, which is to be connected at the position of another heating body to the connection of the pipe conduit network. The adapter (12) has a variable conduit section (30), which has a length, which bridges over an average or maximum distance between the exchange heating body connection and the existing connection. The conduit section is so variable and shortenable that on one side it can be connected, preferably to the connection (14) of the exchange heating body.
