Abstract (en)  
[origin: EP1130684A1] The bridge has two stacked current rails, one with a plug opening and the other with a terminal peg, two elongated adjacent spring contacts (1) fixed together at one end (2) and movable spring elastically at the other end (5), an upper contact zone in the central region of the spring contacts and a lower contact zone near the second end section. The spring contacts are offset near the contact zones to increase their separation. Independent claims are also included for the following: an electrical ganged terminal.
