Abstract (en)
[origin: DE19852693A1] The present invention relates to a soft package for cigarettes that comprises, e.g., a cupular envelope made of paper or other similar packing material. Foldable tabs, mainly edge bands (18, 19) on the one side, bottom tabs, mainly longitudinal tabs (24, 25) on the second side, as well as a closure strip (tax stamp) (32) on the third side are connected between each other and with the package by bonding. A thermo-adhesive (hot-melt) product is applied in adequate locations on a strip of material for producing the package blanks, wherein said product is cured and reactivated by heat supply once the folds or packages are formed. The foldable tabs or the closure strip concerned are interconnected or attached by compression to the package.
