Abstract (en)  
The inventions concern a finger toothbrush including a finger sack portion having a friction surface at least on one outer side thereof, an extension connected to an opening of the finger sack portion, and a slit/slits or a hole/holes provided in a substantially intermediate region of the extension, and a finger toothbrush package unit, wherein a plurality of finger toothbrushes, the friction surfaces of which are hermetically sealed, are connected together. The finger toothbrush is advantageously easy to attach and detach, hygienic, and free from the danger of being inadvertently swallowed.
