Abstract (en)

[origin: EP1132135A2] Microbial reactor array for preventing contamination comprising removable plugs fastened in carrier over-reactors, is new. Closure sections of individual plugs (3) can pass through the carrier (6) in both directions. Individual plugs are so fastened to the carrier that with the carrier set down on the reaction vessels (2), each individual plug can be removed separately from the carrier and from the reaction vessel. An Independent claim is also included for a storage and dispensing unit for individual plugs which facilitates contamination-free processing.
