Abstract (en)

[origin: EP1132276A1] The tarpaulin covered roof has end wall side portals(3) with a narrow width in the longitudinal direction of the wagon. To ensure the necessary support and rolling base for each foot section of the portal a support arm(7) is orientated towards the opposite lying end portal and is equipped with a support roller(8). The support roller is located at a suitable distance from the main load bearing roller(4) in the longitudinal direction and is guided on a second running rail(10).
