Abstract (en)

A product packaging machine with single-fold heat-shrinkable film of the type comprised of a body (11) into which there is formed a chamber (12), provided with a heat source and with a fan for the circulation of the air heated by such heat source and where, on the two sides of the upper edge of the chamber there are mounted blades (13,14) for cutting and heat-sealing the film. The above chamber is closable through a hinged bell (15), so as to determine a single space for the cutting, heat-sealing and heat-shrinking of the film. According to the invention, the machine is provided with a plurality of idle rollers (18), adapted to function as support and transport plane for the above product, for its discharge through gravity. <IMAGE>
