Abstract (en)  
[origin: EP1132403A1] Antagonistic synthetic peptides, obtained from TGF beta 1 or from its receptors in the organism, that can be used in the manufacture, both on their own, as well as the gene sequences that encode them and the recombinant systems that express them, in the manufacture of compositions for use in the treatment of liver diseases and more concretely in cases of fibrosis. The said compositions can optionally include mimotopes of the said active peptides.
