Abstract (en)

[origin: EP1132526A2] Cover comprises a frame (3) and a lid (1). The minimum of three first contact points of the first slanted lid plane (12) or of the first slanted frame plane (32) are elastically moved on the frame before the first assembly of the lid so that the first slanted lid plane and the first slanted frame plane are in alignment. The cover has devices (34) for fixing these elastically movable first contact points in the aligned position. An Independent claim is included for the use of the cover.
