Abstract (en)  
[origin: EP1132541A2] Connecting profile (1) comprises a contact section (2) fixed to a wall and having an upper end (10) and a lower end (11), and a spacer section (3) starting from a first end (14) and extending perpendicular to the lower end of the contact section up to a second end (15). At the second end of the spacer section a binding section (5) extends downward essentially parallel to the contact section from an upper end (16) to a lower end (17). The length of the binding section between the upper and lower end depends on the thickness of the ceiling covering to be used. A bearing surface (6) starts from a first end (20) and extends perpendicular to the upper end of the binding section and away from the contact section up to a second end (21).
