Abstract (en)  
[origin: EP1132551A2] The turning key for a lock device has a body (1) comprising at least two opposing main bodies (11), in which is at least one recess for at least one pin component (1,6) arranged in a core body (9) and a stator body (8) with a probe pin body. Between the first and second main bodies is an additional body, in which are two probe recesses for second pin components (5,6). The second pin components are at least partly arranged in the core body and in the stator body. The first and second main bodies and the additional body are round, oval, rectangular and/or quadratic in cross-section, and in them all a key profile is provided.
