Abstract (en)

[origin: EP1132562A2] The fixture for a sliding panel with tipping possibility involves particularly wooden or plastic rails as frame profiles and the panel having horizontal and vertical rails. Via one of these rails the panel is fitted on movable running carriages. The running carriages are firmly connectable with the panel in corner areas. The carriages have accommodation or support surfaces (21) in the fitted state running vertically to the plane of the panel. A bolt (22) engages in an aperture (21a) of the horizontal surface and is connectable via an elongated plate (23,23a,23b) with the panel. The plate is so formed that the connection is achieved in the area above the horizontal rail of the panel. It has at least two installation positions (24a,24b,25a,25b) spaced (c) apart in the horizontal direction.
