Abstract (en)

[origin: EP1133004A2] The clamp has at least one contact body (13,18) and a clamp spring (14) of a different material, attached to the clamp body at a coupling region, with a spring arm (20) extending in the conductor insertion direction, for clamping the inserted conductor against the contact body. The coupling region of the clamp spring lies on the opposite side of the contact body to the spring arm, the insulating block enclosing the clamp provided with positioning elements for both the contact body and the clamp spring.
