Abstract (en)

[origin: DE19854561A1] Disclosed is a roller for applying a coating agent, especially a paint roller, which has a carrying handle (11). Said carrying handle (11) supports a curved roller axle (18) on which at least one applicator roll (17) is rotatably mounted. According to the invention, the roller axis (18) can be adjusted in its curvature by means of an adjustment device (14) and is then fixed in the respective adjusted curved alignment. This ensures that a coating agent can be evenly, simply applied to even as well as uneven surfaces.
