Abstract (en)
[origin: WO0032592A1] Crystalline paroxetine hydrochloride propan-2-ol solvate having a modified habit that is more easily desolvated to form the anhydrate is obtained by crystallising from a solution of paroxetine hydrochloride in propan-2-ol to which has been added a habit modifier compound. Form A anhydrate is obtained by heating the crystalline solvate of modified habit in a vacuum oven. Suitable habit modifiers are carboxylic acids and amine salts.
