Abstract (en)

[origin: WO0033591A1] The invention relates to a telecommunication terminal, especially a mobile terminal with an integrated data bank and a method for exchanging data sets. The telecommunication terminal is characterized by at least one additional data bank which is also provided. An unequivocal identifier is allocated to each additional data bank. The inventive method is characterized in that an unequivocal identifier is allocated to a specific data bank when data sets are exchanged between telecommunication terminals, whereby said identifier is exchanged in such a way that the data set that is to be transmitted is allocated to the appropriate data bank.
