Abstract (en)

The present invention provides an adhesive gel composition for an iontophoresis allowing a basic drug to be delivered efficiently into an in vivo site and a device therefore. This adhesive gel composition for an iontophoresis comprises (a) basic drug(s), an acidic polymer, a polyfunctional epoxy compound, water and a polyhydric alcohol and/or a gelatin, and the weight ratio of the basic drug(s) to the acidic polymer is preferably 10:1 to 1:10. The basic drug(s) is (are) preferably in a free form.
