Abstract (en)

[origin: EP1134173A2] A machine (10) for stacking paper products in sheets includes at least one signature insertion station (41), at least one insertion station (11) for the boards (20) that complete the signature packs (21) and at least one paper product stacking station (13); the signature insertion station (41) features an initial conveyor belt (17) which conveys the signatures to the subsequent conveyor belts (16, 18, 19) which in their turn convey them to the stacking station (13). The machine (10) has the boards (20) insertion station (11) on the same side of the machine (10) as the signature insertion station (41). The machine (10) also features at least one device (14) for stacking the wads (28) of signatures, the latter located on the opposite side with respect to the signature insertion station (41). <IMAGE>
