Abstract (en)
[origin: EP1134612A2] A photothermographic material is disclosed, comprising a support, a silver halide, an organic silver salt and a reducing agent, wherein the photothermographic material meets the following requirement: $\gamma_{21}/\gamma_0 > 0.7$ where γ_0 and γ_{21} are each a slope of a straight line connecting densities of 0.1 and 2.5 on a characteristic curve obtained when the photographic material is subjected to thermal development at 120 DEG C for 25 sec., and at 118 DEG C for 25 sec., respectively. <IMAGE>
