Abstract (en)  
[origin: WO9965625A1] This invention relates to a punching apparatus (10) that may be used to punch samples (15) from a sheet of paper card (16). The location of potential samples on the paper card (16) is identified by identification means prior to engagement of the punch (11) thereby enabling the user to select those sites (22 and/or 23) on the paper card which possess optimum characteristics. The identification means includes illuminating means for illuminating on the paper card (16) both the location of the site and the peripheral boundary of the potential sample.
