Abstract (en)

[origin: WO0032421A1] The invention is a new process for obtaining transferable images specially for walls in which the image is first processed by computer, printed (upturned) on supports or on transfer paper, then an adhesive binder is laid off the chosen wall, the support or the transfer paper leant against the wall is plugged back to front. Original images perfectly transferred on the pre-treated wall are obtained. This process has the advantage that neither stencils nor standard production are required but each application is original since it is created by the user himself by means of a computer.
