Abstract (en)

[origin: FR2786782A1] The invention concerns a method for detecting the presence in a sample, contained in a sterile receptacle, at least a micro-organism, whatever its breathing metabolism (aerobic or anaerobic), the sample being in contact with a culture medium. The invention also concerns a support used in said method. The method consists in: adding into the receptacle at least a solid inert sterile support; incubating at a suitable temperature; and observing the variation in at least one characteristic related to the presence of the micro-organism(s) to be detected in said receptacle. The invention is particular applicable in the field of diagnosis.
