Abstract (en)  
[origin: WO0022486A1] A process (10) is provided for generating a control program for execution by a logic control unit (12). The process includes the steps of: providing a variable editing user interface (65) allowing a user to define and edit variables associated with corresponding output signals; providing a state editing user interface (65) allowing a user to define and edit a plurality of states of the control program; providing a condition editing user interface (65) allowing a user to define and edit at least one condition for each of the states of the control program, and generating the control program as a function of associative relationships of the variables, states, and conditions.
