Abstract (en)

[origin: WO0126245A1] In a data transmission system for transmitting a predetermined data being provided by IP (8) to a first radio transceiver (10) of a receiving user side, the data transmission system comprises a server (6) operated by the IP (8); and a second radio transceiver (16) of a sending user side connected to the server (6), wherein the server (6) being provided with a control program to control the second radio transceiver (16), and data of the server (6) input to the radio transceiver (10) being transmitted to the radio transceiver (16) through a relay center (9) of a carrier (2).
