Abstract (en)
[origin: WO0035170A1] The invention relates to a mobile communications terminal with a display unit (13) which is subdivided into a first subdomain (16) for exclusively displaying multimedia communications information and a second subdomain (15) for displaying other user information. The display unit (13) is controlled by a display control (11) in such a manner that if there is no multimedia communications information, only the second subdomain (15) of the display unit (13) is controlled in order to minimize the energy consumption of the display unit (13), for example, in the stand-by mode.
