Abstract (en)

[origin: EP1136013A1] Clasp is made of a central part (1) with two arms (2,3) hinged at each end and the bracelet being hinged in turn at each free end of the arms. Bolts (23) are going out of the arm side face when the clasp is opened and cooperate with a bore (24) in the central part in order to lock the bracelet. A pushbutton (8) in the opposite side of the central part is integral with two rods sliding within the bore receiving the bolts and when actuated, it pushes the bolts out of the recess and free the arms from the central part of the clasp.
