Abstract (en)

[origin: EP1136430A2] The truck or fitting has a rotary device (30) enabling loads (20) being transported on a support or in jaws (15) to be held in various orientations. The rotary device can be turned in both directions and through more than 180 degrees and is driven by hydraulic fluid that is cut off when linkages reach elements on fixed points of the truck (10). Independent claims are also included for the following: a method of controlling a rotary device for a lifting truck or fitting.
