Abstract (en)  
The invention relates to a lap-forming apparatus (1) for card webs, of a type that can be used downstream of a carding machine in order to place, onto a collecting surface, the card web (6) exiting from a carding machine in alternate superimposed layers by means of a sprading carriage (4) overhanging the collecting surface and reciprocating with respect thereto; the lap-forming apparatus (1) is provided with isolation means consisting of a partition wall (7) interposed between the carriage and the surface, thereby isolating the card web, going out of the sprading carriage (40), from the any air displacement or pressure wave, generated by the same carriage when moving along. <IMAGE>
