Abstract (en)  
[origin: EP1136622A2] The covering consists of cover plates (3,4) positioned between and on either side of the rails (2) of a track (1). The plates (3) fitted between the rails are shaped like a U-profile extending at right angles to the longitudinal rail direction. The profiled plate has a mainly flat cover wall (9) with downward facing flanged ribs projecting from the wall edges. Support lugs (5) on the cover plates engaging into at least one of the rails are formed by the rib ends only.
