Abstract (en)

[origin: EP1136630A2] The profiled strip (30) can be adapted by elastically deforming its center part (50) to a flat installation position for wall sections lying in one plane and to an angular installation position for angular wall sections. Each hard side part (40) which adjoins the softer center part is held in the relevant installation position through the holding strip (22) of a profiled rail (20) which is supported in the guide channel (43) and in the spacer channel (41,42) whereby the surface of the side part is substantially parallel to the wall section.
