Abstract (en)
[origin: EP1136760A1] System uses a boiler (1) and a cooler (4) to produce two stream of liquid at the right temperature either for feeding the heat exchanger (14) coupled with a fan (15) or the heater (11). A valve (7) controls the opening of the fluid circuit and the feeding of either the heater or the heat exchanger. Both are housed within the same casing.
