Abstract (en)

[origin: EP1137125A2] The crimping tool comprises two branches (20,22) which are hinged together about an axis (19), forming both the crimping jaws (27,28), and the grip handles (33,48). One of the branches (20) forms a magazine supporting a charger (21) containing a number of cabling accessories (14) arranged side by side in a cartridge (14'). The tool also includes a manual advance mechanism driving the cartridge holding the cabling accessories, in order to recharge the tool. This includes a toothed wheel (101) acting on the branch forming the magazine, to turn about an axis which is perpendicular to the longitudinal direction of sliding movement of the cartridge.
