Abstract (en)
A through-hole is formed in a center part of a pole piece of a speaker device, a lamp is mounted so as to be projected forward from the through-hole, and a center cap formed of a transparent resin is provided forward thereof. The lamp is connected in series to a voice coil. Thereby, the speaker device not only produces the sound but also emits light of which brightness varies according to a driving current of the speaker device. <IMAGE>
