Abstract (en)
[origin: DE19857191A1] The invention relates to a half-loop antenna, comprising an antenna bow which is arranged over a ground plane, said antenna bow forming a surface whose outer edge forms a convex, closed curve, i.e., is bent outwards. The contact arrangement of the conductor bow is preferably configured in the form of an ellipse which tapers at the ends. An inductor in the form of a spring can be introduced at the supply point of the conductor loop.
