Abstract (en)

[origin: EP1138249A2] An element (4a-4e) with a capillary action fits in a support element (2) and/or a retaining element (3a,3b) for holding part of a dish brought in contact with the support element and/or retaining element. Alternatively, a draining ledge has an element with a capillary action below the part of the dish that is tilted, in order to draw off water remaining on the deepest place on the dish.
