Abstract (en)

[origin: EP1139030A2] The heating system has a heat generator, and a heat exchanger supplying a heating circuit and a domestic water circuit. The hot water outlet (ww) of the water circuit (BW) in front of the extraction points, is connected to the input of a domestic water charging pump (1) via a circulation pipe (7) and a back pressure valve (4). The pump is located between the cold water outlet (wa) of the water tank (10) for the domestic water charging circuit (SK) and the heat exchanger (3). A charging volume limiter (6) located between the cold water outlet and the changing pump is set to a pre-selected charging volume.
