Abstract (en)
[origin: WO0038514A1] A plant treatment composition for application of an anionic exogenous chemical substance such as glyphosate to foliage of a plant is provided. The composition comprises, in addition to the exogenous chemical substance, one or more amine compound(s) each having formula (I) wherein R<1> is a hydrocarbyl group having 6 to about 22 carbon atoms and at least about 30 % of all R<1> groups present have 14 to about 22 carbon atoms, and R<2> and R<3> are independently C1-5 hydrocarbyl groups. The amine compound(s) of formula (I) are present in the composition in a mole ratio to the exogenous chemical substance of about 0.01:1 to about 0.8:1. The exogenous chemical substance and amine compound(s) of formula (I) are dissolved or dispersed in an agronomically acceptable liquid carrier, preferably water. Also provided is a solid or liquid concentrate composition which, upon dissolution or dispersion in, or dilution with, water, forms a plant treatment composition of the invention. Plant treatment compositions of the invention are useful for eliciting a biological activity, for example herbicidal activity, in a plant.
