Abstract (en)
[origin: US2001042322A1] An insole which extends from the toes to the heel includes at least one fluid-filled container; a control unit for enabling a user to increase or reduce an amount of fluid in the container; and a stirrup-shaped device for immobilizing the talocalcaneonavicular joint and for controlling and/or stabilizing the ankle joint. The insole is a prefabricated insole selectable from a range of differently shaped insoles for the various forms of foot prophylaxis and the various shoe sizes. This enables users to adapt the prefabricated insoles suitable for their shoe size and form of foot prophylaxis to their own personal needs.
