Abstract (en)
[origin: EP1013192A1] The invention concerns a nozzle, detachable or not, designed for a hairdryer, which can be easily modified from a first configuration supplying a hot air stream with a substantially circular cross-section to obtain an air stream substantially rectangular, that is wide and flat, in cross-section. Said nozzle consists of a ferrule (3) provided with two slots (5) capable of pivoting relatively to geometrical axes (7) and flaps (9) capable of producing a pivoting motion relatively to geometrical axes (11) perpendicular to the pivot pins (7) of the slots (5).
