Abstract (en)
[origin: DE19858096A1] The invention relates to a device and method for dispersing particles, especially those that are mixed with at least one binding agent, e.g. fibers containing ligno-cellulose and or cellulose, chips or the like, in order to form a nonwoven i.e. in order to produce formed objects in particular, especially boards. The inventive device and method enable chip boards, fiber boards and combined chip and fiber boards to be produced at low cost. The invention also enables different widths of boards to be produced without having to modify the inventive device.
