Abstract (en)
[origin: FR2788250A1] The invention concerns an arrangement (10) for a motor vehicle body front part structure comprising, from the front rearwards, an engine section (12) closed by a bonnet (14), separated from the vehicle passenger compartment (16) by a substantially transverse engine wall (18) whereof one upper portion comprises, from the front rearwards, a cowl transverse roof drip moulding (20) and a recess lower crosspiece (22), wherein the cowl transverse roof drip moulding (20), in longitudinal cross-section is substantially U-shaped whereof the front branch (28) is flush under the vehicle bonnet (14) and one rear branch (30), which is designed to receive a piece of equipment, in particular a vehicle wiper mechanism (34), joins the recess lower crosspiece (22) whereon rests the windscreen (26). The invention is characterised in that the cowl transverse roof drip moulding (20) is fixed at least on the recess lower crosspiece (22) and is detachable.
