Abstract (en)

[origin: WO0040467A1] The inventive device consists of a deformable receptacle (1) comprising folding means (11, 14, 15) that are associated with closing means enabling the top part of said receptacle (1) to be squeezed in a conical manner and shifted from an open position, wherein it has a substantially cylindrical shape that flares outwards towards the top and can receive one or more objects that are to be packed, and a packed state in which it has a substantially conical shape.
