Abstract (en)
[origin: WO0037324A1] The present invention relates to a unit-load frame-structure, for the holding, storage and, if needed, handling of a primarily suspended flexible shell structure for storage and transportation - practically of loose material and/or other practically lumped product(s), designed as a logistical, rigid and self-bearing frame structure. The characteristic feature of the invention is that the frame structure (1) being a preferably tetragonal-based prism, whose vertical main supports (F1, F2, ..., FN) are positioned at or near the various edges (S1, S2, ..., SN), equipped with a horizontal bottom and a top bracing unit (K1, K2) connected to the vertical main supports (F1, F2, ..., FN) and, the frame structures (1) of the Unit-Load Frame-Structures can be fitted into one another by the temporary disassembling of the frame structures (1) at times they are not being used.
