Abstract (en)

[origin: WO0042260A1] The invention relates to a device for introducing active substances into the flushing water of a toilet pan or the like. The inventive device is made up of a holder which can be fixed to the edge of a toilet pan or the like. Said device is provided with a first chamber for receiving the active substance and a second chamber for enabling the flushing water to be flushed through. At least one connecting opening, a connecting slit or the like is provided between the two chambers so that the active substance can be introduced into the second chamber. A device is provided between the two chambers for maintaining a predetermined water level in the second chamber.
