Abstract (en)
[origin: WO0039512A1] The invention relates to a device for mounting a finned type evaporator (16) which is arranged in a household circulating air refrigeration appliance (10). The inventive device comprises at least one tube (17) which runs in an approximately meander-like manner, which is arranged at least in two rows, and which is provided with fins (22). The device also has a defrost heater for defrosting the finned type evaporator (16) to which a drain pan unit (37) is assigned. Said drain pan unit is provided with a melt water drain (42) and collects melt water that results during defrosting. The drain pan unit (37) serves as a device for mounting the finned type evaporator (16) and is provided with means which can be placed on supporting means provided in an area (12) of the refrigeration device (10), and which, with the melt water drain (42) thereof, interacts with a melt water line (12, 1) that leads melt water out of said area (12), whereby the device is positioned, at least to a large extent, inside the area (12).
