Abstract (en)

[origin: EP1010981A1] A conjugate (I) composed of a toxologically harmless, high molecular weight carrier and a virus-binding substance, is new. Independent claims are also included for the following: (1) means (II) for the enrichment of a virus in the mouth, throat or nose, comprising (I); (2) a complex (III) consisting of (I) and the virus; and (3) a method (IV) for the detection of viruses, comprising: in vivo enrichment of the virus using (I); and (a) detection of the virus in vitro, by the enzymatic activity of the bound virus or absorption of the virus with the following or simultaneous detection of the virus.
