Abstract (en)
[origin: WO0041144A1] The invention relates to an auxiliary device for adding to a device for dispensing a selected article in accordance with the choice of a user; which device comprises a housing with a closable front door; carrier means accommodated in this housing for carrying stocks of articles at different heights, which carrier means also comprise transport means for dispensing the chosen article on the free front side of the carrier means at a height specific to the choice which has been made, the free front side of which carrier means is situated at a certain free spacing from the front door in closed position; a receiving bin accommodated in the housing for receiving a dispensed article; an access opening, via which the user can remove an article lying in the receiving bin; which auxiliary device comprises: lifting means for carrying the receiving bin to said specific height prior to dispensing of an article and for carrying the receiving bin to the height of the access opening after dispensing, which lifting means are movable up and downward in the space defined by said free spacing.
