Abstract (en)
[origin: WO0042756A1] A system for providing a connection between a user computer and a server which are connected to a network, in particular the Internet. An external dial-up connection is installed on the user computer, in which dial-up data of an ISP are programmed, by means of which dial-up data the user computer is capable of making a connection with the Internet via a telephone number forming part of the dial-up data. A browser programme is available in the computer. Further a switching programme is available in the computer, which switching programme is capable of making a connection with a specific server by configuring dial-up data including a specific telephone number of the server in question in the dial-up connection and starting the browser programme once the connection with said server is made, wherein the switching programme connects to URL address from the specific server or from another server via the browser programme.
