Abstract (en)

[origin: EP1142817A2] The frame of a lift glass door panel contains an accommodation aperture. A plate-shaped filling pane (20) has a projection on its front side and locates on the upper and lower edge of the accommodation aperture on the rear side of the frame. The rear side of the filling material is adhered to a holding section (30) in the area of its side edges. The frame incorporates two spaced apart vertical support components (12,14), which form a bending part with the holding sections. The support components beneath and above the filling material are connected by a lower (38) and an upper (36) cross traverse.
